/inbox

Triage inbox findings left by stateful cron jobs

Overview

The inbox collects findings from stateful cron jobs that use the `<inbox>` tag protocol. Findings are stored in a global JSONL file shared across all sessions, so a scheduled nightly job can leave a note that any later session can read, claim, and act on.

Entries move through statuses: pending entries can be claimed (picked up for work) or dismissed (dropped without action). `clear` empties the inbox.

Syntax

```
/inbox list
/inbox claim <entry_id>
/inbox dismiss <entry_id>
/inbox clear
/inbox help
```

Options / Subcommands

Form	Description
`list`	Show all inbox entries with IDs, sources, and statuses
`claim <entry_id>`	Mark an entry as claimed
`dismiss <entry_id>`	Mark an entry as dismissed
`clear`	Remove every finding from the inbox
`help`	Show the subcommand table and the `<inbox>` tag protocol note

Examples

```
From: /inbox list
# | ID | Source | Status | Content (60-char preview)
Empty inbox prints:
Inbox is empty. Findings are added by stateful cron jobs that use the
`<inbox>` tag protocol.
```

```
From: /inbox list
| 1 | a1b2c3d4 | cron/nightly | pending | Flaky test test_render_cost_scaling failed 3x...
1 finding(s) in inbox.
```

```
From: /inbox claim a1b2c3d4
[ok] Entry `a1b2c3d4` marked as claimed.
```

```
From: /inbox dismiss a1b2c3d4
[clr] Entry `a1b2c3d4` marked as dismissed.
```

```
From: /inbox dismiss nosuchid
[warn] Entry `nosuchid` not found in inbox.
```

```
From: /inbox clear
[clr] Cleared 4 finding(s) from the inbox.
```

Output

`list` renders a table with the 8-character entry ID, source, status, and a 60-character content preview, ending with `N finding(s) in inbox.` Claim and dismiss print a one-line `[ok]`/`[clr]` confirmation. Clearing prints the removed count. Unknown IDs print `[warn] Entry ... not found in inbox.` Statuses land in the status bar (`inbox: list`, `inbox: claimed`, and so on).
