

Tools — Office & PDF

Read and write Microsoft Office (DOCX/XLSX/PPTX), LibreOffice (ODT/ODS/ODP), and PDF documents.

Tool	Description
<code>office_read</code>	Read DOCX/XLSX/PPTX content.
<code>office_write</code>	Write Office documents.
<code>office_info</code>	Return Office document metadata.
<code>libre_read</code>	Read ODT/ODS/ODP content.
<code>libre_write</code>	Write LibreOffice documents.
<code>libre_info</code>	Return LibreOffice document metadata.
<code>pdf_read</code>	Extract text from a PDF.
<code>pdf_write</code>	Write a PDF document.

Visibility switch: `office`. See `docs/howtos/office.md` for the full manual.

`office_read` / `libre_read` / `pdf_read`

Extract the text content of a document.

Arguments

Argument	Type	Required	Description	Typical value
<code>path</code>	string	yes	Document path	"report.docx", "spec.pdf"
<code>sheet</code>	string	no (<code>office_read</code>)	Specific worksheet for XLSX	"Sheet1"

Example:

```
office_read path="report.docx"  
pdf_read path="spec.pdf"
```

`office_write` / `libre_write`

Write a document. Format follows the file extension.

Arguments

Argument	Type	Required	Description	Typical value
<code>path</code>	string	yes	Output path	"out.docx"

Argument	Type	Required	Description	Typical value
<code>content</code>	string	yes	Document content (plain text / markdown-ish structure)	—

office_info / libre_info

Return document metadata (title, author, page/sheet counts, etc.).

Arguments

Argument	Type	Required	Description
<code>path</code>	string	yes	Document path

pdf_write

Write plain-text content as a PDF document.

Arguments

Argument	Type	Required	Description	Typical value
<code>path</code>	string	yes	Output path	"notes.pdf"
<code>content</code>	string	yes	Text content to render	—
