/history

Browse and re-use previous inputs; /history [filter] restricts to matching entries (arrow keys to select, Enter to insert, c to copy to clipboard); /history help

Overview

`/history` opens an interactive picker over the inputs you have typed this session, newest first. Use the up/down arrow keys to move the selection, Enter to insert the chosen entry back into the input box for editing and resubmission, or `c` to copy the selected entry to the system clipboard (the picker stays open so several entries can be copied in one session). An optional argument filters the list to entries containing that substring (case-insensitive).

If there is no input history yet, or the filter matches nothing, the status bar reports it and no picker opens. `/history help` prints the subcommand table.

Syntax

```
/history              # open the history picker (newest first)
/history <filter>     # restrict the picker to matching entries
/history help         # show the subcommand table
```

Options / Subcommands

Form	Description
`/history`	Open the history picker (newest first; up/down to select, Enter to insert, c to copy to clipboard)
`/history <filter>`	Restrict the picker to entries containing `<filter>`
`/history help`	Show the `/history` help table

Notes:

- Filtering is a case-insensitive substring match on the entry text; the argument itself is lowercased before matching.
- Opening the picker clears the current input line and resets the cursor, so Enter cleanly replaces whatever was being typed.
- Entries are shown in reverse chronological order (newest first) and the picker starts with the newest entry selected.
- `c` copies the highlighted entry to the system clipboard and leaves the picker open; the status bar shows `history: copied to clipboard`.

Examples

```
/history
```

```
/history cargo
```

Only inputs containing `cargo` are listed (e.g. past prompts that mentioned cargo commands).

```
/cancel help
```

(illustrative `/help`-style subcommand table printed by `/history help`)

```
## /history - Input history

| Subcommand | Description |
|---|---|
| `/history` | Open the history picker (newest first; up/down to select, Enter to insert, c to co
| `/history <filter>` | Restrict the picker to entries containing `<filter>` |
| `/history help` | Show this help |
```

Empty history (status bar, no picker):

```
No input history yet
```

Filter with no matches:

```
No history entries contain "zzz"
```

Output

- Picker opened: the input line is cleared and the history picker overlay is shown with the newest matching entry selected; no assistant bubble is emitted for the open action.
- `/history help`: assistant bubble `From: /history help` with the subcommand table; status shows `history: help`.
- Empty history: status bar `No input history yet`.
- No filter matches: status bar `No history entries contain "<filter>"`.
- `c` pressed: the highlighted entry is written to the system clipboard and the status bar shows `history: copied to clipboard`; the picker stays open.

Related

- `/clear` - wipe the displayed message history (input history is separate)
- `/session` - resume stored sessions
- The picker supports text selection and clipboard copy of entries
- `c` copies the highlighted entry to the clipboard directly from the picker
