

Tools — PDF

Read and write PDF documents.

Tool	Description
<code>pdf_read</code>	Extract text or metadata from a PDF.
<code>pdf_write</code>	Write a PDF document.

Visibility switch: none — the PDF family is registered and visible by default. See `docs/howtos/office.md` for the full manual.

`pdf_read`

Extract text, metadata, or structured per-page JSON from a PDF.

Arguments

Argument	Type	Required	Description	Typical value
<code>path</code>	string	yes	PDF path	<code>"spec.pdf"</code>
<code>start_page</code>	integer	no	First page (1-based, inclusive)	<code>1</code>
<code>end_page</code>	integer	no	Last page (1-based, inclusive)	<code>10</code>
<code>format</code>	string	no	text (default), metadata, or json	<code>"metadata"</code>

Example:

```
pdf_read path="spec.pdf"
pdf_read path="paper.pdf" start_page=3 end_page=7
pdf_read path="report.pdf" format="metadata"
```

`pdf_write`

Write a PDF document from structured content.

Arguments

Argument	Type	Required	Description	Typical value
<code>path</code>	string	yes	Output path	<code>"notes.pdf"</code>

Argument	Type	Required	Description	Typical value
<code>content</code>	object	yes	Document content: optional title and an elements array of paragraph/heading/table/image items	—

Example:

```
pdf_write path="report.pdf" content={"title":"Report","elements":[{"type":"heading","level":1,"text":"Report"}]}
```
