Tools — Spec Management

Query specification lifecycle state and work through spec task plans.

Tool	Description
`spec_read`	Read a specification by ID.
`spec_list`	List all specifications.
`spec_search`	Search specifications by keyword.
`spec_task_update`	Update a task's status within a spec.
`spec_coverage`	Generate a requirement coverage report.

See `docs/howtos/spec.md` for the full spec workflow.

---

spec_read

Read a specification: full `SPEC.md` content, requirements, tasks, and current status.

Arguments

Argument	Type	Required	Description	Typical value
`spec_id`	string	yes	Alphanumeric/hyphen/underscore identifier	`"terse-refactor"`

---

spec_list

List all specifications.

Arguments

Argument	Type	Required	Description	Typical value
`status`	enum	no	Filter: `draft`, `in_review`, `approved`, `in_progress`, `implemented`, `verified`, `archived`	`"draft"`

---

spec_search

Case-insensitive substring search across spec titles and content (not semantic).

Arguments

Argument	Type	Required	Description
`query`	string	yes	Keyword to find

---

spec_task_update

Update a task's status within a spec; mirrors the session task tracker.

Arguments

Argument	Type	Required	Description	Typical value
`spec_id`	string	yes	Spec identifier	`"govdoc"`
`task_id`	string	yes	Task within the plan	`"T-001"`
`status`	enum	yes	`pending`, `in_progress`, `completed`, `blocked`	`"completed"`

---

spec_coverage

Show which spec requirements are linked to completed tasks; verify coverage before marking a spec complete.

Arguments

Argument	Type	Required	Description
`spec_id`	string	yes	Spec identifier

Example:

```
spec_read spec_id="govdoc"
spec_task_update spec_id="govdoc" task_id="T-014" status="completed"
spec_coverage spec_id="govdoc"
```
