/mouse

Toggle mouse support: /mouse on | off | help

Overview

`/mouse` controls whether the terminal UI responds to mouse events. When disabled, the interface is keyboard-only and the command lists the keyboard shortcuts that replace mouse interaction.

Syntax

```
/mouse              Show the current mouse state and usage
/mouse on           Enable mouse support
/mouse off          Disable mouse support (keyboard-only)
/mouse help         Print the help table
```

Options / Subcommands

Form	Description
(bare)	Show the current state (enabled or disabled) plus the usage line.
`on`	Set `mouse_enabled = true` and confirm.
`off`	Set `mouse_enabled = false` and print the keyboard-only message with the shortcut list.
`help`	Print the help table.

`--help` and `-h` are accepted as aliases of `help`.

Examples

`/mouse on`

Enables mouse support; scroll and click events are delivered to the UI.

`/mouse off`

Disables mouse support and prints the keyboard-only reminder with the shortcuts.

`/mouse`

Reports whether mouse support is currently on or off, and the usage line.

`/mouse help`

Prints the table above.

Output

`on` confirms mouse support is enabled. `off` confirms it is disabled and lists the keyboard shortcuts that cover mouse functions:

- `Alt+Up` / `Alt+Down` – move between teammates

- `Tab` – navigate
- `Enter` – select
- `Esc` – close dialogs
- `Ctrl+C` – copy, `Ctrl+V` – paste

The bare form prints the current state and usage; `help` prints the table.

Related

- Keyboard shortcuts replace all mouse interactions when disabled.
