# /task

Toggle the TASKS side panel, or list/help tasks: /task [list|help]

## Overview

`/task` has two roles. With no arguments it toggles the TASKS side panel on or off; showing the panel hides the log, profile, memory, and telemetry panels so only one side panel is visible at a time. With arguments it operates on session tasks: `list` renders the task table, `add`/`create`/`update`/`get` route to the `TaskCreate`, `TaskUpdate`, and `TaskGet` tools.

## Syntax

```
/task
/task list [status]
/task add <subject>
/task create <subject>
/task update <id> <status>
/task get <id>
/task help
```

## Options / Subcommands

| Form | Description |
|---|---|
| (bare) | Toggle the Tasks side panel |
| `list [status]` | Render the task table, optionally filtered by status |
| `add <subject>` | Create a task via `TaskCreate` |
| `create <subject>` | Alias for `add` |
| `update <id> <status>` | Change a task's status via `TaskUpdate` |
| `get <id>` | Inspect one task via `TaskGet` |
| `help` | Show this subcommand table |

Valid statuses for `update` and the `list` filter are the session tracker's `pending`, `in_progress`, and `completed`.

## Examples

```
From: /task
tasks panel visible
(The panel opens; a second bare /task hides it.)
```

```
From: /task list
| ID | Status | Subject |
| T-1 | [wait] pending | Write migration script |
| T-2 | [sync] in_progress | Update SPEC.md |
```

```
From: /task list completed
Only completed tasks are shown.
```

From: /task add Update the changelog
A new session task is created via TaskCreate and appears in /task list.

From: /task update T-1 completed
TaskUpdate marks T-1 completed; dependent tasks are re-evaluated.

From: /task get T-1
TaskGet returns the full record: description, owner, blocked_by.

## Output

The bare form prints `tasks panel visible` or `tasks panel hidden`. `list` renders the task table with status icons `[wait]` pending, `[sync]` in progress, `[ok]` completed. The add/update/get forms show the tool's result in the message window.

The TASKS side panel renders one row per session task as `[STATUS] <id> title`, so the task identifier is visible without opening `/task get`. The panel takes 50% of the window width.
